

POLYAMIDE SCREW CLAMP TERMINAL BLOCKS

ELECDIRECT.COM POLYAMIDE SCREW CLAMP TERMINAL BLOCKS

Can accommodate two conductors of the same size per clamping unit.

High tightening torque because of cold forged rolled threaded screws.

Tin plated current carrying part ensures very low contact resistance.

The changes caused by temperature variation (if any) are effectively equalised by the elasticity of steel. This provides excellent vibration resistance.

The Connection:

elecDirect.com's Screw Clamp Terminal Blocks provide maximum wiring efficiency and reliability. These Terminal Blocks provide a vibration-proof connection and the clamps do not need to be re-tightened. All the parts in the Terminal Block are captive. They have high contact force and are absolutely gas tight, thus providing a reliable electrical and mechanical connection.

SCREW CLAMP TERMINAL BLOCKS

DISCONNECT & TEST TERMINAL BLOCKS

These blocks are used for measuring, control and regulatory circuits. They provide a clear functional advantage for devices having utility instruments and associated transformers.

In CDTTU / CDTTUSH Disconnection is achieved by means of a slide link operated with a screw driver.

In CKT4U & CKT4U/S Disconnection is achieved by lifting a lever which operates the knife contact.

CKT4U/S is another version of CKT4U Terminal Block in which regular slotted screws are used instead of specially designed socket headed screws.

In CSDL4U / CSDL6U / DDDL4U Disconnection is achieved by a hinged lever.

Specially designed socket headed screws act as test monitoring points in Disconnecting & Test Terminal Blocks.

Note: These disconnecting Terminal Blocks are not suitable for interrupting load. The supply must be switched off before operating the disconnecting link.

TERMINAL BLOCK TECHNICAL INFORMATION

ATEX APPROVED TERMINAL BLOCKS

The ATEX approved Terminal Blocks have been assured for compliance with :

- EN 50014
- EN 60079-7
- EN 50020
- EN 50281-1-1-1

Certification can be traced to Techspan Certificate Number TÜV 06 ATEX 2968U

Technical Data:

Operating Temperature	-40°C to +85°C
Maximum Voltage for intrinsically safe "i" circuits *	60 V

Type No.	Rated Voltage			Rated Current	Wire Range
	for DIN 35 Rail	for DIN 32 Rail	for DIN 15 Rail

For installation instructions refer to www.elecDirect.com

TERMINAL BLOCK TECHNICAL INFORMATION

WIRE TIGHTENING

The design of the elecDirect.com Screw Clamps / Cable Lug system ensures vibration proof positive connection wires at the recommended torque values. However, elecDirect.com Terminal Blocks can withstand torque levels in excess of the recommended torque values. The Terminal Block clamping parts when tightened within the torque range ensure optimum performance as given below:

- ▣ The voltage drop (contact resistance) is well below the specified limits
- ▣ The wire gets clamped perfectly to form a gas tight connection
- ▣ The clamping yoke does not get damaged mechanically. The tightening torque according to IEC 60947-7-1 table 4, is the safe limit of the torque which guarantees the successful clamping of the connected wire.

elecDirect.com Terminal Blocks tightening torque data is given in the respective product pages.

All elecDirect.com Terminal Blocks are designed to function with rated wire sizes as per their respective AWG (American Wire Gauge) or Metric size/system. The Terminal Blocks are tested for Gauge Insertion as per VDE 0660.

Tightening Torque for Screw Clamp Terminal Blocks

Terminal Blocks	Thread Size of Fastener	Recommended Torque Value
CTS2.5UN/CPT(M)/CPT5	M 2.5	0.4 Nm
CTS2.5(M)/CMST1/CMST2	M 2.6	0.4 Nm

TERMINAL BLOCK TECHNICAL INFORMATION

ELECTRICAL DATA

elecDirect.com Terminal Blocks are standard blocks for industries such as Switchgear, Distribution, Machine Tools Control, Instrumentation Installations, Material Handling Equipments, Process Plants On and Offshore Installations and Panel Board Construction.

Rated Voltage

The voltage rating of the product is assigned in accordance with specifications related to Creepage & Clearance distance defined in respective **EN, VDE, UL** and **CSA** standards, for the environmental conditions and pollution degrees as given below.

Degree of Pollution

Pollution degree 1

No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.

Pollution degree 2

Only non-conductive pollution occurs except that occasionally a temporary conductivity caused by condensation is to be expected.

Pollution degree 3

Conductive pollution occurs or dry, non conductive pollution occurs which becomes conductive due to condensation is to be expected.

Pollution degree 4

The pollution generates persistent conductivity caused by conductive dust or by rain or snow.

Rated Impulse Voltage

The rated impulse voltage of the product is the peak value of an impulse voltage with which the terminal block can be loaded and on which the creepage and clearances according to relevant standard are based.

CTI - Comparative Tracking Index of Insulation material

The insulation material is divided into four groups according to their CTI (Comparative Tracking Index)

Insulation I	600 ≤ CTI
Insulation II	400 ≤ CTI < 600
Insulation III a	175 ≤ CTI < 400
Insulation III b	100 ≤ CTI < 175

The Comparative Tracking Index must be defined according to **DIN IEC 112/ VDE 0303 part 1** on specimens made specifically for this purpose with test solution A. The proof-tracking index (PTI) is also used to identify the tracking characteristics of materials. A material may be included in one of the four groups given above on the basis that its PTI, established by the method of IEC 112 using solution A, is equal to or greater than the lower value specified for the Insulation group.

Current carrying capacity of terminal block (DIN EN 60947-7-1/VDE 0611part1: 2000-05)

The data given below is for unprepared conductor ends without ferrules. The rated current for Terminal Blocks with specific functions such as Fuse type, Relays, Terminal Blocks incorporating electronic components is to be specified by manufacturer.

Rated Cross Section (sq.mm)	0.2	0.5	0.75	1	1.5	2.5	4	6	10	16	25	35	50	70	95	120	150	185	240	300
Test current (A)	4	6	9	13.5	17.5	24	32	41	57	76	101	125	150	192	232	269	309	353	415	520

Current Rating with two wire/conductors

The total current of the two wires / conductors should not exceed the continuous current rating of the Terminal Block. The continuous current rating is the maximum current the terminal block can conduct without a temperature rise of 45 K (as per EN standard) and 300C (as per UL / CSA standard).

Note

For PE-Terminals only one conductor should be connected per clamping part, in accordance with installation requirement.

TERMINAL BLOCK TECHNICAL INFORMATION

TERMINAL BLOCK MATERIAL

Polyamide 6.6

Engineering Thermoplastic Polyamide 6.6 has excellent electrical, mechanical and chemical characteristics, even at temperature as high as 105°C. This insulating material has high mechanical strength - it is unbreakable. Its resistance to tracking is similar to Melamine. The Polyamide 6.6 moulded housing absorbs humidity from its surroundings. However, it does not crystallise water in the plastic itself as is the case in thermosetting plastic. The H₂O groups combine within the molecular structure.

Thus moulded plastic housing becomes fracture proof and unbreakable even in sub zero temperature conditions.

Polyamide 6.6 is difficult to ignite, self-extinguishing, burns only as long as there is a supporting flame and is rated V2 according to UL 94. It has excellent resistance to micro organisms, bacteria, enzymes and termites. Good ageing resistance and insensitivity to ultra violet light makes it suitable for tropical and open air applications. Polyamide 6.6 has excellent resistance to fuels, oils, fats and most common solvents like aliphatic and aromatic carbohydrates, ketons and alcohols.

Typical properties of insulation material

Property	Unit	Thermoset High Grade Melamine	Engineering Thermoplastic Polyamide 6.6
Specific Gravity	-	1.5	1.2 - 1.15
Upper Temperature Limit	°C	130	105
Lower Temperature Limit	°C	- 55	- 50
Volume Resistivity	Ohm cm	10 ¹¹	10 ¹²
Surface Resistivity	Ohm	10 ¹⁰	10 ¹⁰
Dielectric Strength	KV/cm	100	400
Tropical Resistance	-	Good	Good
Flammability	Grade	V0	V2 / V0 [#]
Flexibility	-	-	Excellent

CE Marking

The CE marking is, in particular an indication that the products comply with the essential requirements of applicable directives and that the products have been subject to a conformity assessment procedure provided for in the directives. CE marking ensures free trading within Europe. elecDirect.com terminal blocks are CE marked and the products comply to Low Voltage Directive, 73/23/EEC,

At elecDirect.com the Product Development cycle, production & assembly of components and supply are all controlled by an ISO 9001:2000 Quality Management System.

elecDirect.com Products not only fulfill Customers needs and requirements of standards and specifications but also surpass the same.
