Flashlight

Identify the trouble spot from a distance

Floodlight

Drench the work area with light

Dual-Light

Activate both for expanded safety in work area or while walking

DUAL-LIGHT INNOVATION

For over 85 years flashlight functionality has not changed very much. Sizes and shapes have changed, but not the way a flashlight is used. Flashlights have always been used to spot objects at a distance... a task that most flashlights perform well. Flashlights are also used to illuminate objects at close range...something that conventional flashlights do not do well.

Until NIGHTSTICK, law enforcement, military and industrial professionals had few options.

FLASHLIGHT
NIGHTSTICK incorporates reflectors that capture and shape the maximum amount of available light from the latest high-output LEDs.

FLOODLIGHT

The best lighting solution for searching, wide-area viewing or close-in work. Combining a separate floodlight with a flashlight into a single housing, is the NIGHTSTICK *Dual-Light INNOVATION*. The floodlight spreads the light over an area four times broader than the flashlight beam with no hot spots that impair visibility.

Only NIGHTSTICK Offers Flashlight • Floodlight • Dual-light Capability
All NIGHTSTICK dual-lights employ a bright focused flashlight beam for maximum throw and a floodlight for close-up work. Activate both for the ultimate in workplace safety and utility... only NIGHTSTICK has dual-light capability.
